

DigiTRAK® CableLink® Connection System

The DigiTrak® CableLink® Connection System is designed for HDD contractors who use wireline systems and want to shave significant time from their pilot bores. Now wireline connections can be made by simply screwing together the drill pipe sections.

- Automatically makes electrical and mechanical connections
- Increases productivity on pilot bores
- Eliminates splicing tools and materials
- Is permanently installed into drill pipe
- Can be used with any DCI cable system and on non-wireline jobs
- Makes tool tripping no longer an issue

Automatic Wireline Connections

The CableLink® system is permanently installed into the drill rods, so the mechanical and electrical connections occur automatically when the rods are threaded together. This eliminates the need for splicing equipment and trip-outs to find a faulty connection.

No More Tripping Out

For contractors running a wireline with a mud motor in conditions where tooling wear is a concern, tripping out to check the tool face is no longer the time-consuming issue it once was. The result is increased productivity with fewer personnel.

The CableLink® system can be used with any DCI cable transmitter system. It can also be used with battery-operated transmitters on non-wireline jobs.
